BAY-DELTA ACCORD EXTENDED

SACRAMENTO – State and federal officials are extending the historic Bay-Delta Accord for an additional year, reaffirming the commitment to continue work with the major water interests – agricultural, urban, fishing and environmental – to develop a long-term solution to the state's problems in the Bay-Delta system.

The agreement extends the commitments of the state and federal governments outlined in the 1994 Bay-Delta Accord until Dec. 31, 1999, at which time a CALFED Record of Decision (ROD) is expected. The ROD is the document in which the state and federal agencies finalize the programmatic decision. The final decision package will replace the Accord at which time implementation of Stage 1 of the CALFED Program will begin.

The Accord extension allows the state and federal agencies and stakeholder interests to continue work towards a Bay-Delta system solution without interruption. In December, CALFED expects to issue a Phase II Report and draft preferred alternative that takes into account public comments received to date, outlines the assurances and finance package, and details proposed Stage 1 actions (the first seven years) of program implementation.

Public workshops will be held around the state early next year to explain the proposals and provide opportunities for public comment.

The original Accord was signed Dec. 15, 1994, and set forward principles towards the implementation of a permanent Bay-Delta protection plan. Several important aspects of the Accord were scheduled to expire in December 1998.

CALFED expects to finalize the selection of the preferred alternative, complete environmental compliance documentation and release a final EIS/EIR in late fall 1999. After a final public review, a Record of Decision/Notice of Determination should be made in December 1999.
